

HAJAR

AUTONOMOUS DEFI GUARDIAN · SOMNIA AGENTIC L1

Hajar is a multi-tenant autonomous DeFi guardian with nine live defense tiers on Somnia testnet. Any protocol calls registerProtocol() to get protected – Hajar-as-a-Service. Zero mocks.

SELF-LEARNING THREAT INTELLIGENCE

HajarThreatLearner v2 uses all 3 Somnia agent types with rotating source pools per exploit category. The feedback loop: assessRisk() injects the learned threatLandscape() into an inferNumber prompt so the AI judgment is shaped by what Hajar learned from the web. LIVE PROVEN: learned market-stress=9, AT returned risk=75 hv validator consensus – informed hv that learning.
